Recommendation

⚠ Not IC-ready — insufficient evidence

The failed checks reflect missing evidence, not negative findings. Collect the missing metrics and DD answers, then re-screen.

- 5D overall score 1.8 (min 2.5) (missing data)
- SDG 7 (Affordable and Clean Energy): 41.8 vs. min 60.0 (missing data)
- DD checklist coverage 41.7 (min 70) (missing data)

Confidence: partly evidenced — some scores rest on a few reported metrics.

💡 What would change our mind

The three pieces of evidence that would move this assessment most.

- 1 Answer: Does the company have a clearly defined theory of change that links its activities to intended outcomes?**

High-priority due-diligence question not answered by the documents.

- 2 Answer: Is the impact embedded in the core business model, or is it peripheral/CSR-adjacent?**

High-priority due-diligence question not answered by the documents.

🕒 Impact at a glance

Material SDGs and how the company's activities lead to outcomes, from the claims in the documents.

WHAT THEY DO

SunPath Energy Ltd sells pay-as-you-go solar home systems to off-grid households in rural Kenya.

OUTPUTS

Our carbon methodology is verified by a third-party auditor under Gold Standard rules.

Around 25 million people in Kenya still light their homes with kerosene or have no electricity at all.

OUTCOMES

A 2025 study by an independent evaluator compared customers with a matched control group and found 18% higher evening...

We have connected 42,000 households across 14 counties, replacing kerosene lamps and reducing household energy spend by...

Our systems avoided an estimated 20,000 tCO2e in 2024.

TARGETS

Over the next three years we target 150,000 connected households and 80,000 tCO2e avoided per year, and we report...

📊 Five Dimensions of Impact

Scored 1-5. The tick shows the sector benchmark where one exists.

Other goals (context only): 2, 3, 4, 6, 10, 11, 12, 14, 15, 16

Evidence ledger

Every claim found in the documents and every metric used in scoring.

Claims (9)

Claim	Type	NESTA level	Evidence	Metric
Around 25 million people in Kenya still light their homes with kerosene or have no electricity at all.	output	●●○○○	—	—
We have connected 42,000 households across 14 counties, replacing kerosene lamps and reducing household energy spend by 30%.	outcome	●●○○○	—	PI7954 Client Households: Total
Our systems avoided an estimated 20,000 tCO2e in 2024.	outcome	●●○○○	—	OI2764 Greenhouse Gas Emissions Avoided
Repayment rates stay above 92% and we employ 310 staff, of whom 41% are women.	outcome	●●○○○	—	OI8869 Permanent Employees: Total OI6213 Full-time Employees: Female
Who we serve 62% of our customers live below the national poverty line according to the Poverty Probability Index, and 71% had no electricity before buying from us.	outcome	●●○○○	—	—
A 2025 study by an independent evaluator compared customers with a matched control group and found 18% higher evening study hours for children and lower reported respiratory symptoms.	outcome	●●●○○	✓ Controlled evaluation	
Over-indebtedness: we cap instalments at 10% of estimated household income and offer payment holidays after crop failures.	outcome	●●○○○	—	—

Claim	Type	NESTA level	Evidence	Metric
Over the next three years we target 150,000 connected households and 80,000 tCO2e avoided per year, and we report against IRIS+, SDG 7/1/13 and the GOGLA impact metrics.	intent	●●○○○	—	—
Our carbon methodology is verified by a third-party auditor under Gold Standard rules.	output	●●●○○	✓ Third-party verified	

Metrics (4)

Metric	Value	Origin
OI2764 · Greenhouse Gas Emissions Avoided	20,000 tCO2e	extracted from text
OI6213 · Full-time Employees: Female	127 (derived: 41% of 310)	derived
OI8869 · Permanent Employees: Total	310	extracted from text
PI7954 · Client Households: Total	42,000	extracted from text

Greenwashing review — 34/100 · Substantive with gaps

Components of the 0–100 risk score. At 60 or above risk is a finding; below it mostly reflects missing data.

Risks and opportunities

Disclosed in the documents

- Kerosene is expensive, causes indoor air pollution and burns, and keeps children from studying after dark.
- Over-indebtedness: we cap instalments at 10% of estimated household income and offer payment holidays after crop failures.

Typical for the sector — check in diligence

- Environmental impact: land use, waste from equipment, resource extraction
- Community displacement: risk of displacing communities for energy projects
- Technology risk: rapidly changing technology making investments obsolete

Opportunities

- Clean energy access: providing affordable clean energy to underserved areas
- Climate mitigation: reducing greenhouse gas emissions
- Energy independence: reducing reliance on fossil fuels
- Job creation: creating green energy employment opportunities

Action plan

De-duplicated next steps, most important first.

#	Action plan	Area
1	Coverage is below 30% of the core metric set. Start with: Energy Generated for Sale: Renewable, Energy Capacity of Products Sold, Client Feedback System.	Metrics
2	Measure HOW MUCH: track scale (# stakeholders), depth (degree of change), and duration	Impact
3	Assess CONTRIBUTION: establish counterfactual or benchmark comparison	Impact
4	Evaluate RISK: assess evidence risk, execution risk, and external risk factors	Impact

#	Action plan	Area
5	Report the negative impacts that matter for energy, e.g. Greenhouse Gas Emissions: Direct (Scope 1) (OI4112 (Greenhouse Gas Emissions: Direct (Scope 1))); Greenhouse Gas Emissions: Indirect (Scope 2) (OI9604 (Greenhouse Gas Emissions: Indirect (Scope 2))); Greenhouse Gas Emissions: Total (OI1479 (Greenhouse Gas Emissions: Total))	Evidence quality
6	Include risk-oriented and negative-impact metrics alongside positive outcomes	Evidence quality
7	Report Energy Generated for Sale: Renewable (PI5842 (Energy Generated for Sale: Renewable)); Energy Capacity of Products Sold (PD1504 (Energy Capacity of Products Sold)); Product Hours of Light Available (PI3486 (Product Hours of Light Available)) to strengthen SDG 7 evidence (2/133 currently tracked)	SDGs
8	Add impact themes: Climate, Climate Change Mitigation	SDGs
9	Report Product Targeted to Women (PD5677 (Product Targeted to Women)); Women's Career Advancement Initiative (OD4232 (Women's Career Advancement Initiative)); Access to Personal Protective Equipment (PPE) (OI1023 (Access to Personal Protective Equipment (PPE))) to strengthen SDG 5 evidence (1/168 currently tracked)	SDGs
10	Add specific outcome descriptions related to "No Poverty" targets in company documentation	SDGs

Methodology and definitions

How this report was produced

- Claims are extracted from the documents and graded on the NESTA standards of evidence; quantities are mapped to IRIS+ metric IDs only when unit and context are unambiguous.
- Five Dimensions scores (1-5) come from reported metrics where available and from document text otherwise; the evidence label says which.
- SDG scores (0-100) combine goal-specific metric coverage, inference from the business and impact themes; cross-cutting metrics count at reduced weight.
- Greenwashing risk weights claim-metric gaps (30%), missing negative impacts (20%), vague language (20%), selective reporting (15%) and lack of verification (15%).
- The IC gate applies the fund thesis thresholds; failures caused by missing data are reported as insufficient evidence, not as a negative finding.
- Scores use methodology v1.2.0 (config ae3e77ecaccf); reports are comparable only when both match.

AI & automation disclosure

Automated analysis: produced by rules and a deterministic scoring model; no generative AI was used. 2 of 21 scores are estimated from document text rather than reported metrics. Review before relying on it.

Claim extraction	rules
Score calculation	deterministic model
Metric / SDG tagging	rules
Narrative drafting	not used

Disclosed under the EU AI Act Art 50 transparency rules.

Terms used in this report

Impact claim

A statement in a pitch deck or report about the change a company creates ("we connected 42,000 households"). Impact Vision extracts each claim, maps it to a metric where possible and grades how well it is evidenced.

IRIS+

The Global Impact Investing Network's catalogue of standard impact metrics (about 790 in version 5.3c), each with a short ID such as OI2764 for "Greenhouse Gas Emissions Avoided". Using the same IDs makes results comparable across companies and funds.

Core metric set

The short list of IRIS+ metrics a company in a given sector should report. Coverage is the share of that list the company reports; Impact Vision picks the list by sector.

Five Dimensions of Impact (5D)

The Impact Management Project's framework for describing impact: What outcome occurs, Who experiences it, How Much change (scale, depth, duration), the investor's and company's Contribution compared with what would have happened anyway, and the Risk that impact doesn't happen. Impact Vision scores each dimension from 1 to 5.

Evidence-based / partial / estimated

How a score was derived. Evidence-based scores rest on several reported metrics; partial scores on a few; estimated scores only on the text of the documents. Treat estimated scores as a starting hypothesis, not a finding.

SDG alignment

How strongly the company's activities and metrics relate to each of the 17 UN Sustainable Development Goals (0-100). A goal is "material" when the company claims it, its business clearly relates to it, or it reports a goal-specific metric; other goals are context only.

NESTA standards of evidence

A five-level scale for how strong evidence of impact is: 1 = a narrative, 2 = data showing change, 3 = a comparison or control group suggesting the company caused it,

4-5 = independent or replicated rigorous evaluations.

Third-party verification

An independent organisation (auditor, certifier, regulator) has checked a figure or practice. It raises confidence in a claim and lowers greenwashing risk.

Additionality

Whether the outcome would have happened anyway without the company or investor. Strong additionality means the impact depends on them.

Greenwashing (impact-washing) risk

A 0-100 score of how far a company's claims run ahead of its evidence: vague language, claims without metrics, missing negative impacts, selective reporting and no verification. Below 60 it mostly reflects missing data; at 60 or above it is a finding in itself.

Due diligence (DD) coverage

The share of the impact due-diligence questions (universal plus the company's sector) that the documents already answer. Low coverage means more questions to ask, not a bad company.

IC gate

The fund's minimum thresholds before a deal goes to the investment committee (5D score, top SDG score, DD coverage, greenwashing risk, exclusions). "Insufficient evidence" means the failures are missing data; "Fail" means a negative finding.

Theory of change

The chain from what a company does (activities) to what it produces (outputs) to the changes people or the planet experience (outcomes), with the assumptions that must hold along the way.

Scope 1, 2 and 3 emissions

Greenhouse-gas emissions from a company's own operations (Scope 1), from the energy it buys (Scope 2) and from its value chain (Scope 3), as defined by the GHG Protocol.

tCO₂e

Tonnes of carbon-dioxide equivalent: a common unit that converts all greenhouse gases to the warming effect of CO₂.
