Recommendation

❗ Not IC-ready — insufficient evidence

The failed checks reflect missing evidence, not negative findings. Collect the missing metrics and DD answers, then re-screen.

- 5D overall score 1.7 (min 2.5) (missing data)
- SDG 2 (Zero Hunger): 35.0 vs. min 60.0 (missing data)
- DD checklist coverage 40.8 (min 70) (missing data)

Confidence: partly evidenced — some scores rest on a few reported metrics.

💡 What would change our mind

The three pieces of evidence that would move this assessment most.

1 Report Social and Environmental Targets (OD4091)

Contribution is the weakest dimension (1.3/5, estimated); this is a core metric for the sector.

2 Negative-impact metrics for the sector

Only positive metrics are reported; omissions raise greenwashing risk.

3 Answer: Does the company have a clearly defined theory of change that links its activities to intended outcomes?

High-priority due-diligence question not answered by the documents.

Impact at a glance

Material SDGs and how the company's activities lead to outcomes, from the claims in the documents.

SDG 2 · Zero Hunger		35
SDG 13 · Climate Action		35
SDG 8 · Decent Work and Economic Growth		34
SDG 12 · Responsible Consumption and Production		32
SDG 15 · Life on Land		32
SDG 6 · Clean Water and Sanitation		30

WHAT THEY DO

Kampung Makmur is a 3,000-sow commercial pig farm in Johor, Malaysia, operating an integrated breed-to-finish facility with a licensed biogas-to-power plant.

OUTPUTS

We are SEDEX-audited and have a 4-tier grievance mechanism.

Risks we actively manage include: (i) ASF biosecurity - all farms are fenced, SPF breeding stock, shower-in/out...

We report against IRIS+, SDG 2/6/7/8/12/13, GRI standards, and have commissioned a first independent ESG audit for...

OUTCOMES

Water withdrawal per kg of live weight dropped 31% versus our 2020 baseline, independently verified by SIRIM.

A 2024 randomized pilot with Universiti Putra Malaysia compared 120 outgrower households to a matched control group and...

Since 2022 we have reduced antibiotic use by 62% through vaccination and group-housing, and replaced 100% of...

TARGETS

Over the next five years we target: 45% reduction in Scope 1+2 emissions intensity (kg CO2e / kg live weight); 80% of...

Five Dimensions of Impact

Scored 1-5. The tick shows the sector benchmark where one exists.

Evidence ledger

Every claim found in the documents and every metric used in scoring.

Claims (10)

Claim	Type	NESTA level	Evidence	Metric
Since 2022 we have reduced antibiotic use by 62% through vaccination and group-housing, and replaced 100% of conventional slatted housing with deep-litter, enrichment-enabled pens benchmarked against the EU Welfare Quality protocol.	outcome	●●○○○	—	—
Our biogas plant captures methane from manure lagoons and generates 1.8 GWh of electricity per year, replacing ~920 tonnes CO2e of grid emissions and cutting our grid electricity purchases by 74%.	outcome	●●○○○	—	OI2496, OI2764
Water withdrawal per kg of live weight dropped 31% versus our 2020 baseline, independently verified by SIRIM.	outcome	●●●○○	✓ Third-party verified ✓ Baseline comparison	—
We employ 142 staff, of whom 38% are women and 64% are from Kluang district; median wage is 42% above the Johor agricultural minimum and every worker is enrolled in SOCSO and EPF.	outcome	●●○○○	—	OI8869, OI6213

Claim	Type	NESTA level	Evidence	Metric
We run an outgrower programme with 18 smallholder piggeries, supplying feed and veterinary support at wholesale cost; participating smallholders report average income uplifts of RM 1,850 per month (baseline: RM 900).	outcome	●●○○○	✓ Baseline comparison	PI9991
A 2024 randomized pilot with Universiti Putra Malaysia compared 120 outgrower households to a matched control group and found 23% higher household food-security scores and 17% higher child school attendance.	outcome	●●●○○	✓ Controlled evaluation	—
Over the next five years we target: 45% reduction in Scope 1+2 emissions intensity (kg CO2e / kg live weight); 80% of breeding sows in group-housing >= 10 weeks after weaning; 35 outgrower households onboarded; and a SBTi near-term target submission by 2027.	intent	●●○○○	—	—
We are SEDEX-audited and have a 4-tier grievance mechanism.	output	●●○○○	✓ Audited	—
Risks we actively manage include: (i) ASF biosecurity - all farms are fenced, SPF breeding stock, shower-in/out protocol, quarterly third-party audit by the Department of Veterinary Services; (ii) nutrient run-off during monsoon - on-site retention ponds sized to 1-in-100-year storm, automated ammonia sensors; (iii) community odour - a covered-lagoon retrofit was completed in Q3 2025 and the formal complaints rate has dropped from 14 to 2 per year.	output	●●○○○	✓ Audited	—

Claim	Type	NESTA level	Evidence	Metric
-------	------	-------------	----------	--------

We report against IRIS+, SDG 2/6/7/8/12/13, GRI standards, and have commissioned a first independent ESG audit for FY2026.

Metrics (5)

Metric	Value	Origin
OI2496 · Energy Generated for Use: Renewable	1,800 MWh	extracted from text
OI2764 · Greenhouse Gas Emissions Avoided	920 tCO2e	extracted from text
OI6213 · Full-time Employees: Female	54 (derived: 38% of 142)	derived
OI8869 · Permanent Employees: Total	142	extracted from text
PI9991 · Supplier Individuals: Smallholder	18	extracted from text

Greenwashing review — 49/100 · Moderate risk

Components of the 0–100 risk score. At 60 or above risk is a finding; below it mostly reflects missing data.

Flags: Missing negative-impact metrics for sector; Reporting appears to cherry-pick positive metrics

Risks and opportunities

Disclosed in the documents

- Founded in 2014 by a second-generation farmer, the company has repositioned itself around animal welfare, antibiotic-stewardship and manure-to-energy circularity following the regional ASF outbreaks.
- ASF biosecurity - all farms are fenced, SPF breeding stock, shower-in/out protocol, quarterly third-party audit by the Department of Veterinary Services
- nutrient run-off during monsoon - on-site retention ponds sized to 1-in-100-year storm, automated ammonia sensors
- community odour - a covered-lagoon retrofit was completed in Q3 2025 and the formal complaints rate has dropped from 14 to 2 per year

Typical for the sector — check in diligence

- Environmental degradation: soil depletion, water pollution from fertilizers/pesticides
- Climate vulnerability: sensitivity to extreme weather events and climate change
- Labor conditions: risk of exploitative labor practices
- Land use change: deforestation or biodiversity loss from land conversion
- Market volatility: commodity price fluctuations affecting farmer incomes
- Environmental pollution: waste management, methane emissions, water contamination

Opportunities

- Food security: improving access to nutritious food for underserved populations
- Poverty reduction: increasing income for smallholder farmers
- Sustainable supply chains: promoting responsible sourcing and production
- Climate adaptation: developing climate-resilient farming practices
- Rural employment: creating jobs in farming communities
- Food security: providing protein and nutrition to local markets

Action plan

De-duplicated next steps, most important first.

#	Action plan	Area
1	Coverage is below 30% of the core metric set. Start with: Social and Environmental Targets, Water Withdrawn, Board of Directors: Total.	Metrics
2	Priority missing metrics: OD4091 (Social and Environmental Targets), OI0263 (Water Withdrawn), OI1075 (Board of Directors: Total), OI1479 (Greenhouse Gas Emissions: Total), OI1571 (Full-time Employees: Female Managers)	Metrics
3	Measure HOW MUCH: track scale (# stakeholders), depth (degree of change), and duration	Impact
4	Assess CONTRIBUTION: establish counterfactual or benchmark comparison	Impact
5	Evaluate RISK: assess evidence risk, execution risk, and external risk factors	Impact
6	Map each SDG claim to at least one IRIS+ metric with reported data	Evidence quality
7	Report adverse-impact metrics appropriate for agriculture sector (e.g., GHG emissions, client protection)	Evidence quality
8	Include risk-oriented and negative-impact metrics alongside positive outcomes	Evidence quality
9	Add specific outcome descriptions related to "Zero Hunger" targets in company documentation	SDGs
10	Add specific outcome descriptions related to "Climate Action" targets in company documentation	SDGs

Methodology and definitions

How this report was produced

- Claims are extracted from the documents and graded on the NESTA standards of evidence; quantities are mapped to IRIS+ metric IDs only when unit and context are unambiguous.
- Five Dimensions scores (1–5) come from reported metrics where available and from document text otherwise; the evidence label says which.

- SDG scores (0–100) combine goal-specific metric coverage, inference from the business and impact themes; cross-cutting metrics count at reduced weight.
- Greenwashing risk weights claim–metric gaps (30%), missing negative impacts (20%), vague language (20%), selective reporting (15%) and lack of verification (15%).
- The IC gate applies the fund thesis thresholds; failures caused by missing data are reported as insufficient evidence, not as a negative finding.

Terms used in this report

Impact claim

A statement in a pitch deck or report about the change a company creates ("we connected 42,000 households"). Impact Vision extracts each claim, maps it to a metric where possible and grades how well it is evidenced.

IRIS+

The Global Impact Investing Network's catalogue of standard impact metrics (about 790 in version 5.3c), each with a short ID such as OI2764 for "Greenhouse Gas Emissions Avoided". Using the same IDs makes results comparable across companies and funds.

Core metric set

The short list of IRIS+ metrics a company in a given sector should report. Coverage is the share of that list the company reports; Impact Vision picks the list by sector.

Five Dimensions of Impact (5D)

The Impact Management Project's framework for describing impact: What outcome occurs, Who experiences it, How Much change (scale, depth, duration), the investor's and company's Contribution compared with what would have happened anyway, and the Risk that impact doesn't happen. Impact Vision scores each dimension from 1 to 5.

Evidence-based / partial / estimated

How a score was derived. Evidence-based scores rest on several reported metrics; partial scores on a few; estimated scores only on the text of the documents. Treat estimated scores as a starting hypothesis, not a finding.

SDG alignment

How strongly the company's activities and metrics relate to each of the 17 UN Sustainable Development Goals (0-100). A goal is "material" when the company claims it, its business clearly relates to it, or it reports a goal-specific metric; other goals are context only.

NESTA standards of evidence

A five-level scale for how strong evidence of impact is: 1 = a narrative, 2 = data showing change, 3 = a comparison or control group suggesting the company caused it, 4-5 = independent or replicated rigorous evaluations.

Third-party verification

An independent organisation (auditor, certifier, regulator) has checked a figure or practice. It raises confidence in a claim and lowers greenwashing risk.

Additionality

Whether the outcome would have happened anyway without the company or investor. Strong additionality means the impact depends on them.

Greenwashing (impact-washing) risk

A 0-100 score of how far a company's claims run ahead of its evidence: vague language, claims without metrics, missing negative impacts, selective reporting and no verification. Below 60 it mostly reflects missing data; at 60 or above it is a finding in itself.

Due diligence (DD) coverage

The share of the impact due-diligence questions (universal plus the company's sector) that the documents already answer. Low coverage means more questions to ask, not a bad company.

IC gate

The fund's minimum thresholds before a deal goes to the investment committee (5D score, top SDG score, DD coverage, greenwashing risk, exclusions). "Insufficient evidence" means the failures are missing data; "Fail" means a negative finding.

Theory of change

The chain from what a company does (activities) to what it produces (outputs) to the changes people or the planet experience (outcomes), with the assumptions that must hold along the way.

Scope 1, 2 and 3 emissions

Greenhouse-gas emissions from a company's own operations (Scope 1), from the energy it buys (Scope 2) and from its value chain (Scope 3), as defined by the GHG Protocol.

tCO₂e

Tonnes of carbon-dioxide equivalent: a common unit that converts all greenhouse gases to the warming effect of CO₂.
