10 claims

5 IRIS+ metrics

How much change, for whom, and how sure we are. Reach × depth × duration, less what would have happened anyway, credited to the company and weighted by the chance it happens. Ranges come from the evidence behind each figure.

63/100

good · NESTA 2/3 · third-party verified

18%

of the sector's core metrics reported

61 depth-weighted person-years

moderate uncertainty: P90 is $\times 5.5$ the P10

Reach	120	120 households reported (NESTA 3)
-------	-----	-----------------------------------

Duration (years)		57%
Reach		20%
Attribution		12%

“A 2024 randomized pilot with Universiti Putra Malaysia compared 120 outgrower households to a matched control group

Depth of change	31%	31% change reported (NESTA 3)	and found 23% higher household food-security scores and 17% higher child school attendance.”●●●○○
Duration (years)	3	typical for agriculture	
Without deadweight	100%	netted out by the comparison group	
Attribution	70%	share credited to the enterprise	
Probability of success	80%	evidence level 3	

Climate

860 tCO2e

wide uncertainty: P90 is ×7.5 the P10

What goes into it

Tonnes per year	920	920 tCO2e reported (NESTA 2)
Duration (years)	3	typical for agriculture
Without deadweight	70%	no comparison group: ~30% would have happened anyway

What drives the uncertainty

Duration (years)		41%
Tonnes per year		41%
Without deadweight		9%

“Our biogas plant captures methane from manure lagoons and generates 1.8 GWh of electricity per year, replacing ~920 tonnes CO2e of grid emissions and cutting our grid electricity purchases by 74%.”●●○○○

Attribution	70%	share credited to the enterprise
-------------	-----	----------------------------------

Probability of success	65%	evidence level 2
------------------------	-----	------------------

Targets stated (to compare with actual results later)

- Over the next five years we target: 45% reduction in Scope 1+2 emissions intensity (kg CO2e / kg live weight); 80% of breeding sows in group-housing $\geq$ 10 weeks after weaning; 35 outgrower households onboarded; and a SBTi near-term target submission by 2027.

Impact at a glance

Material SDGs and how the company's activities lead to outcomes, from the claims in the documents.

| Sector prior (illustrative: GIIN publishes no 5D scores; context from the sector reports cited) — Food / agriculture impact funds; n≈58 (GIIN 2022 SOTM)

SDG alignment

Material goals only (claimed, inferred from the business, or evidenced by a goal-specific metric), scored 0–100.

Other goals (context only): 3, 9, 10, 11, 14, 16, 17

Evidence ledger

Every claim found in the documents and every metric used in scoring.

Claims (10)

Claim	Type	NESTA level	Evidence	Metric
-------	------	-------------	----------	--------

Claim	Type	NESTA level	Evidence	Metric
Since 2022 we have reduced antibiotic use by 62% through vaccination and group-housing, and replaced 100% of conventional slatted housing with deep-litter, enrichment-enabled pens benchmarked against the EU Welfare Quality protocol. p. 3	outcome	●●○○○	—	—
Our biogas plant captures methane from manure lagoons and generates 1.8 GWh of electricity per year, replacing ~920 tonnes CO2e of grid emissions and cutting our grid electricity purchases by 74%. p. 4	outcome	●●○○○	—	O12496 Energy Generated for Use: Renewable O12764 Greenhouse Gas Emissions Avoided
Water withdrawal per kg of live weight dropped 31% versus our 2020 baseline, independently verified by SIRIM. p. 4	outcome	●●●○○	✓ Third-party verified ✓ Baseline comparison	
We employ 142 staff, of whom 38% are women and 64% are from Kluang district; median wage is 42% above the Johor agricultural minimum and every worker is enrolled in SOCSO and EPF. p. 5	outcome	●●○○○	—	O18869 Permanent Employees: Total O16213 Full-time Employees: Female
We run an outgrower programme with 18 smallholder piggeries, supplying feed and veterinary support at wholesale cost; participating smallholders report average income uplifts of RM 1,850 per month (baseline: RM 900). p. 5	outcome	●●○○○	✓ Baseline comparison	P19991 Supplier Individuals: Smallholder

Claim	Type	NESTA level	Evidence	Metric
A 2024 randomized pilot with Universiti Putra Malaysia compared 120 outgrower households to a matched control group and found 23% higher household food-security scores and 17% higher child school attendance. p. 5	outcome	●●●○○	✓ Controlled evaluation	
Over the next five years we target: 45% reduction in Scope 1+2 emissions intensity (kg CO2e / kg live weight); 80% of breeding sows in group-housing >= 10 weeks after weaning; 35 outgrower households onboarded; and a SBTi near-term target submission by 2027. p. 5	intent	●●○○○	—	—
We are SEDEX-audited and have a 4-tier grievance mechanism. p. 5	output	●●○○○	✓ Audited	—
Risks we actively manage include: (i) ASF biosecurity - all farms are fenced, SPF breeding stock, shower-in/out protocol, quarterly third-party audit by the Department of Veterinary Services; (ii) nutrient run-off during monsoon - on-site retention ponds sized to 1-in-100-year storm, automated ammonia sensors; (iii) community odour - a covered-lagoon retrofit was completed in Q3 2025 and the formal complaints rate has dropped from 14 to 2 per year. p. 6	output	●●○○○	✓ Audited	—

Claim	Type	NESTA level	Evidence	Metric
We report against IRIS+, SDG 2/6/7/8/12/13, GRI standards, and have commissioned a first independent ESG audit for FY2026. p. 7	output	●●○○○	✓ Audited	—

Metrics (5)

Metric	Value	Origin

OI2764 · Greenhouse Gas Emissions Avoided	920 tCO2e	extracted from text
OI6213 · Full-time Employees: Female	54 (derived: 38% of 142)	derived
OI8869 · Permanent Employees: Total	142	extracted from text
PI9991 · Supplier Individuals: Smallholder	18	extracted from text

Risks and opportunities

Disclosed in the documents

- Founded in 2014 by a second-generation farmer, the company has repositioned itself around animal welfare, antibiotic-stewardship and manure-to-energy circularity following the regional ASF outbreaks.
- ASF biosecurity - all farms are fenced, SPF breeding stock, shower-in/out protocol, quarterly third-party audit by the Department of Veterinary Services
- nutrient run-off during monsoon - on-site retention ponds sized to 1-in-100-year storm, automated ammonia sensors

Opportunities

- Food security: improving access to nutritious food for underserved populations
- Poverty reduction: increasing income for smallholder farmers
- Sustainable supply chains: promoting responsible sourcing and production
- Climate adaptation: developing climate-resilient farming practices
- Rural employment: creating jobs in farming communities
- Food security: providing protein and nutrition to local markets

- community odour - a covered-lagoon retrofit was completed in Q3 2025 and the formal complaints rate has dropped from 14 to 2 per year

Typical for the sector — check in diligence

- Environmental degradation: soil depletion, water pollution from fertilizers/pesticides
- Climate vulnerability: sensitivity to extreme weather events and climate change
- Labor conditions: risk of exploitative labor practices
- Land use change: deforestation or biodiversity loss from land conversion
- Market volatility: commodity price fluctuations affecting farmer incomes
- Environmental pollution: waste management, methane emissions, water contamination

Methodology and definitions

How this report was produced

- Claims are extracted from the documents and graded on the NESTA standards of evidence; quantities are mapped to IRIS+ metric IDs only when unit and context are unambiguous.
- Five Dimensions scores (1-5) come from reported metrics where available and from document text otherwise; the evidence label says which.
- SDG scores (0-100) combine goal-specific metric coverage, inference from the business and impact themes; cross-cutting metrics count at reduced weight.
- Scores use methodology v1.2.0 (config ae3e77ecaccf); reports are comparable only when both match.
- Expected impact (methodology 2.0.0, illustrative): reach × depth × duration × (1 – deadweight) × attribution × probability of success; each factor's spread follows its NESTA evidence level; 4000 seeded Monte Carlo draws give P10/P50/P90. Evidence quality and data completeness are reported separately, never multiplied in.

AI & automation disclosure

Automated analysis: produced by rules and a deterministic scoring model; no generative AI was used. 3 of 22 scores are estimated from document text rather than reported metrics. Review before relying on it.

Claim extraction	rules
Score calculation	deterministic model
Metric / SDG tagging	rules
Narrative drafting	not used

Disclosed under the EU AI Act Art 50 transparency rules.

Terms used in this report

Impact claim

A statement in a pitch deck or report about the change a company creates ("we connected 42,000 households"). Impact Vision extracts each claim, maps it to a metric where possible and grades how well it is evidenced.

IRIS+

The Global Impact Investing Network's catalogue of standard impact metrics (about 790 in version 5.3c), each with a short ID such as OI2764 for "Greenhouse Gas Emissions Avoided". Using the same IDs makes results comparable across companies and funds.

Core metric set

The short list of IRIS+ metrics a company in a given sector should report. Coverage is the share of that list the company reports; Impact Vision picks the list by sector.

Five Dimensions of Impact (5D)

The Impact Management Project's framework for describing impact: What outcome occurs, Who experiences it, How Much change (scale, depth, duration), the investor's and company's Contribution compared with what would have happened anyway, and the Risk that impact doesn't happen. Impact Vision scores each dimension from 1 to 5.

Evidence-based / partial / estimated

How a score was derived. Evidence-based scores rest on several reported metrics; partial scores on a few; estimated scores only on the text of the documents. Treat estimated scores as a starting hypothesis, not a finding.

SDG alignment

How strongly the company's activities and metrics relate to each of the 17 UN Sustainable Development Goals (0-100). A goal is "material" when the company claims it, its business clearly relates to it, or it reports a goal-specific metric; other goals are context only.

NESTA standards of evidence

A five-level scale for how strong evidence of impact is: 1 = a narrative, 2 = data showing change, 3 = a comparison or control group suggesting the company caused it, 4-5 = independent or replicated rigorous evaluations.

Third-party verification

An independent organisation (auditor, certifier, regulator) has checked a figure or practice. It raises confidence in a claim and lowers greenwashing risk.

Scope 1, 2 and 3 emissions

Greenhouse-gas emissions from a company's own operations (Scope 1), from the energy it buys (Scope 2) and from its value chain (Scope 3), as defined by the GHG Protocol.

tCO₂e

Tonnes of carbon-dioxide equivalent: a common unit that converts all greenhouse gases to the warming effect of CO₂.
