Recommendation

Evidence plan required

Not a negative finding: the evidence plan below lists what to collect, biggest effect on the answer first.

- evidence quality moderate (57/100, needs 60)

Evidence quality: 57/100 · moderate

Expected impact	Evidence quality	Top SDG	Greenwashing risk
21,000 depth-weighted person-years · P10 8,300 – P90 57,000	**57**/100 moderate · 18% core metrics	7 **SDG 7** Affordable and Clean Energy · 42/100	**34**/100 Substantive with gaps · finding threshold 60

What would change our mind

The evidence that would narrow the range most, in order.

1. **Have the headline reach figure (42,000 households) verified by a third party.**
   Reach drives most of the remaining uncertainty.

2. **Report the sector's core metrics: Energy Generated for Sale: Renewable, Energy Capacity of Products Sold, Client Feedback System.**
   Only 18% of the core set is reported.

3. **Back the main figures with data: monitoring records, surveys or audited accounts.**
   Evidence quality is moderate (57/100).

Expected impact

How much change, for whom, and how sure we are. Reach × depth × duration, less what would have happened anyway, credited to the company and weighted by the chance it happens. Ranges come from the evidence behind each figure.

Evidence quality

57/100

moderate · NESTA 2/3 · third-party verified

Data completeness

18%

of the sector's core metrics reported

People · households

21,000 depth-weighted person-years

P10 8,300 P50 21,000 P90 57,000

wide uncertainty: P90 is ×6.8 the P10

What goes into it

Reach	42,000	42,000 households reported (NESTA 2)
Depth of change	18%	18% change reported (NESTA 3)
Duration (years)	5	typical for energy
Without deadweight	100%	netted out by the comparison group
Attribution	70%	share credited to the enterprise
Probability of success	80%	evidence level 3

What drives the uncertainty

Reach	**45%**
Duration (years)	**29%**
Depth of change	**16%**

> “We have connected 42,000 households across 14 counties, replacing kerosene lamps and reducing household energy spend by 30%.”●●○○○

Climate

32,000 tCO2e

P10 12,000 P50 32,000 P90 81,000

wide uncertainty: P90 is ×6.5 the P10

What goes into it

Tonnes per year	20,000	20,000 tCO2e reported (NESTA 2)
Duration (years)	5	typical for energy
Without deadweight	70%	no comparison group: ~30% would have happened anyway
Attribution	70%	share credited to the enterprise
Probability of success	65%	evidence level 2

What drives the uncertainty

Tonnes per year	**48%**
Duration (years)	**31%**
Without deadweight	**11%**

> “Our systems avoided an estimated 20,000 tCO2e in 2024.”●●○○○

Targets stated (to compare with actual results later)

- Over the next three years we target 150,000 connected households and 80,000 tCO2e avoided per year, and we report against IRIS+, SDG 7/1/13 and the GOGLA impact metrics.

Impact at a glance

Material SDGs and how the company's activities lead to outcomes, from the claims in

the documents.

- SDG 7 · Affordable and Clean Energy — 42
- SDG 13 · Climate Action — 37
- SDG 5 · Gender Equality — 30
- SDG 1 · No Poverty — 30
- SDG 8 · Decent Work and Economic Growth — 27
- SDG 9 · Industry, Innovation and Infrastructure — 26

WHAT THEY DO

SunPath Energy Ltd sells pay-as-you-go solar home systems to off-grid households in rural Kenya.

OUTPUTS

Our carbon methodology is verified by a third-party auditor under Gold Standard rules.

OUTCOMES

A 2025 study by an independent evaluator compared customers with a matched control group and found 18% higher evening…

We have connected 42,000 households across 14 counties, replacing kerosene lamps and reducing household energy spend by…

Our systems avoided an estimated 20,000 tCO2e in 2024.

TARGETS

Over the next three years we target 150,000 connected households and 80,000 tCO2e avoided per year, and we report…

Five Dimensions of Impact

Scored 1–5. The tick shows the sector benchmark where one exists.

Claims (8)

Claim	Type	NESTA level	Evidence	Metric
We have connected 42,000 households across 14 counties, replacing kerosene lamps and reducing household energy spend by 30%. p. 4	outcome	●●○○○	—	**PI7954** Client Households: Total
Our systems avoided an estimated 20,000 tCO2e in 2024. p. 4	outcome	●●○○○	—	**OI2764** Greenhouse Gas Emissions Avoided
Repayment rates stay above 92% and we employ 310 staff, of whom 41% are women. p. 4	outcome	●●○○○	—	**OI8869** Permanent Employees: Total **OI6213** Full-time Employees: Female
Who we serve 62% of our customers live below the national poverty line according to the Poverty Probability Index, and 71% had no electricity before buying from us. p. 5	outcome	●●○○○	—	—

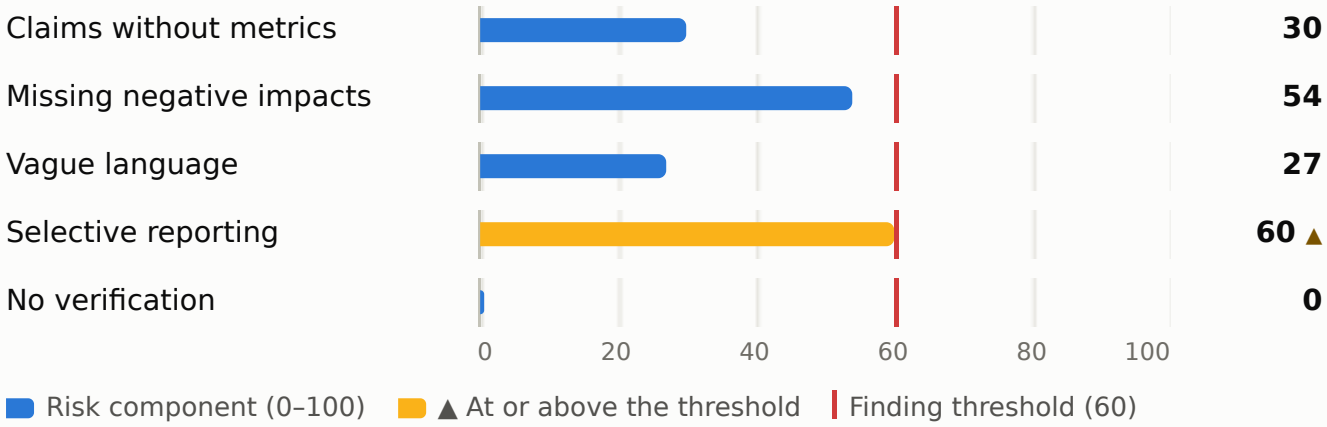

Claim	Type	NESTA level	Evidence	Metric
A 2025 study by an independent evaluator compared customers with a matched control group and found 18% higher evening study hours for children and lower reported respiratory symptoms. p. 6	outcome	●●●○○	✓ Controlled evaluation	
Over-indebtedness: we cap instalments at 10% of estimated household income and offer payment holidays after crop failures. p. 7	outcome	●●○○○	—	—
Over the next three years we target 150,000 connected households and 80,000 tCO2e avoided per year, and we report against IRIS+, SDG 7/1/13 and the GOGLA impact metrics. p. 8	intent	●●○○○	—	—
Our carbon methodology is verified by a third-party auditor under Gold Standard rules. p. 6	output	●●●○○	✓ Third-party verified	

Metrics (4)

Metric	Value	Origin
OI2764 · Greenhouse Gas Emissions Avoided	20,000 tCO2e	extracted from text
OI6213 · Full-time Employees: Female	127 (derived: 41% of 310)	derived
OI8869 · Permanent Employees: Total	310	extracted from text
PI7954 · Client Households: Total	42,000	extracted from text

Greenwashing review — 34/100 · Substantive with gaps

Components of the 0–100 risk score. At 60 or above risk is a finding; below it mostly reflects missing data.

Risks and opportunities

Potential negative impacts

Harms a business like this can cause, scored severity × likelihood (ESRS impact materiality). A control described in the documents lowers likelihood. Unaddressed material items are questions for diligence, not findings.

Negative impact	Severity	Likelihood	Materiality	Control in the documents
Forced or child labour in the polysilicon / mineral supply chain supply-chain workers · PAI 10 (UNGC/OECD violations)	3/3	2/3	● 6/9 · material	Not described — ask
End-of-life batteries and panels become hazardous e-waste communities, environment	2/3	2/3	● 4/9 · moderate	Described “E-waste: we take back and recycle batteries at end of life through a certified partner.”

Negative impact	Severity	Likelihood	Materiality	Control in the documents
Pay-as-you-go customers fall into arrears or lose the asset low-income customers	2/3	1/3	**2/9 · low**	Described “Over-indebtedness: we cap instalments at 10% of estimated household income and offer payment holidays after crop failures.” “Repayment rates stay above 92% and we employ 310 staff, of whom 41% are women.”

Exclusion-list topics the documents mention

The company names these topics while denying, guarding against or replacing them. That is not a finding. Confirm each one in due diligence.

- **Predatory Lending**

  > “Over-indebtedness: we cap instalments at 10% of estimated household income and offer payment holidays after crop failures.”

Disclosed in the documents

- Over-indebtedness: we cap instalments at 10% of estimated household income and offer payment holidays after crop failures. E-waste: we take back and recycle batteries at end of life through a certified partner. Product safety: all kits meet the Lighting Global quality standard.

Typical for the sector — check in diligence

- Environmental impact: land use, waste from equipment, resource extraction
- Community displacement: risk of displacing communities for energy projects
- Technology risk: rapidly changing technology making investments obsolete

Opportunities

- Clean energy access: providing affordable clean energy to underserved areas
- Climate mitigation: reducing greenhouse gas emissions
- Energy independence: reducing reliance on fossil fuels
- Job creation: creating green energy employment opportunities

Action plan

De-duplicated next steps, most important first.

#	Action plan	Area
1	Coverage is below 30% of the core metric set. Start with: Energy Generated for Sale: Renewable, Energy Capacity of Products Sold, Client Feedback System.	Metrics
2	Measure HOW MUCH: track scale (# stakeholders), depth (degree of change), and duration	Impact
3	Evaluate RISK: assess evidence risk, execution risk, and external risk factors	Impact
4	Report the negative impacts that matter for energy, e.g. Greenhouse Gas Emissions: Direct (Scope 1) (OI4112); Greenhouse Gas Emissions: Indirect (Scope 2) (OI9604); Greenhouse Gas Emissions: Total (OI1479)	Evidence quality
5	Include risk-oriented and negative-impact metrics alongside positive outcomes	Evidence quality
6	Report Energy Generated for Sale: Renewable (PI5842); Energy Capacity of Products Sold (PD1504); Product Hours of Light Available (PI3486) to strengthen SDG 7 evidence (2/133 currently tracked)	SDGs
7	Add impact themes: Climate, Climate Change Mitigation	SDGs
8	Report Product Targeted to Women (PD5677); Women's Career Advancement Initiative (OD4232); Access to Personal Protective Equipment (PPE) (OI1023) to strengthen SDG 5 evidence (1/168 currently tracked)	SDGs
9	Add specific outcome descriptions related to "No Poverty" targets in company documentation	SDGs
10	Add impact themes: Employment, Diversity And Inclusion	SDGs

Methodology and definitions

How this report was produced

- Claims are extracted from the documents and graded on the NESTA standards of evidence; quantities are mapped to IRIS+ metric IDs only when unit and context are unambiguous.

- Five Dimensions scores (1–5) come from reported metrics where available and from document text otherwise; the evidence label says which.
- SDG scores (0–100) combine goal-specific metric coverage, inference from the business and impact themes; cross-cutting metrics count at reduced weight.
- Greenwashing risk weights claim–metric gaps (30%), missing negative impacts (20%), vague language (20%), selective reporting (15%) and lack of verification (15%).
- The IC gate applies the fund thesis thresholds; failures caused by missing data are reported as insufficient evidence, not as a negative finding.
- Scores use methodology v1.2.0 (config e0d5e058eba0); reports are comparable only when both match.
- Expected impact (methodology 2.2.0, illustrative): reach × depth × duration × (1 − deadweight) × attribution × probability of success; each factor's spread follows its NESTA evidence level; 4000 seeded Monte Carlo draws give P10/P50/P90. Evidence quality and data completeness are reported separately, never multiplied in.

AI & automation disclosure

Automated analysis: produced by rules and a deterministic scoring model; no generative AI was used. 2 of 21 scores are estimated from document text rather than reported metrics. Review before relying on it.

Claim extraction	rules
Score calculation	deterministic model
Metric / SDG tagging	rules
Narrative drafting	not used

Disclosed under the EU AI Act Art 50 transparency rules.

Terms used in this report

Impact claim
: A statement in a pitch deck or report about the change a company creates ("we connected 42,000 households"). Impact Vision extracts each claim, maps it to a metric where possible and grades how well it is evidenced.

IRIS+
: The Global Impact Investing Network's catalogue of standard impact metrics (about 790 in version 5.3c), each with a short ID such as OI2764 for "Greenhouse Gas Emissions Avoided". Using the same IDs makes results comparable across companies and funds.

Core metric set
: The short list of IRIS+ metrics a company in a given sector should report. Coverage is the share of that list the company reports; Impact Vision picks the list by sector.

Five Dimensions of Impact (5D)
: The Impact Management Project's framework for describing impact: What outcome occurs, Who experiences it, How Much change (scale, depth, duration), the investor's

and company's Contribution compared with what would have happened anyway, and the Risk that impact doesn't happen. Impact Vision scores each dimension from 1 to 5.

Evidence-based / partial / estimated
: How a score was derived. Evidence-based scores rest on several reported metrics; partial scores on a few; estimated scores only on the text of the documents. Treat estimated scores as a starting hypothesis, not a finding.

SDG alignment
: How strongly the company's activities and metrics relate to each of the 17 UN Sustainable Development Goals (0-100). A goal is "material" when the company claims it, its business clearly relates to it, or it reports a goal-specific metric; other goals are context only.

NESTA standards of evidence
: A five-level scale for how strong evidence of impact is: 1 = a narrative, 2 = data showing change, 3 = a comparison or control group suggesting the company caused it, 4-5 = independent or replicated rigorous evaluations.

Third-party verification
: An independent organisation (auditor, certifier, regulator) has checked a figure or practice. It raises confidence in a claim and lowers greenwashing risk.

Greenwashing (impact-washing) risk
: A 0-100 score of how far a company's claims run ahead of its evidence: vague language, claims without metrics, missing negative impacts, selective reporting and no verification. Below 60 it mostly reflects missing data; at 60 or above it is a finding in itself.

Due diligence (DD) coverage
: The share of the impact due-diligence questions (universal plus the company's sector) that the documents already answer. Low coverage means more questions to ask, not a bad company.

IC gate
: The fund's minimum thresholds before a deal goes to the investment committee (5D score, top SDG score, DD coverage, greenwashing risk, exclusions). "Insufficient evidence" means the failures are missing data; "Fail" means a negative finding.

Scope 1, 2 and 3 emissions
: Greenhouse-gas emissions from a company's own operations (Scope 1), from the energy it buys (Scope 2) and from its value chain (Scope 3), as defined by the GHG Protocol.

tCO2e
: Tonnes of carbon-dioxide equivalent: a common unit that converts all greenhouse gases to the warming effect of CO2.

ESRS / CSRD / VSME
: The EU sustainability reporting rules (CSRD) and their standards (ESRS). The revised ESRS became law in September 2026 and apply from 2027. VSME is the voluntary standard for smaller companies; from 2027 large reporters may not ask partners with up to 1,000 employees for more than VSME data.
